**Looking to Prepare Yourself for the Challenges in Developing a Biosecurity Plan?
You're in the Right Place.**

BioSecurity 2002

With the myriad of threats existing in the world today, the public expects to be protected by those “in the know” — medical professionals, scientists, researchers, first responders, health care. They expect to be protected by people like you. But while the hazards are becoming commonplace, the solutions often remain evasive.

BioSecurity 2002 has brought together the brightest minds in science and research — professionals driven to develop the biosecurity plans that will safeguard our communities and resources from biological attack.

During the conference’s four information-packed days, attendees have access to comprehensive, practical information presented by internationally respected scientists and researchers.

Attendees can also visit BioSecurity’s educational programs, designed by Harvard Medical International. These sessions allow you to evaluate firsthand the latest products, services and programs from a wide array of academic, public and private organizations.

You’re in the right place.

Prepare yourself for the future.
